

3D gypsum panels

About us

Artpole is the largest manufacturer of 3D gypsum panels in Russia. The unique technology of production under the control of Flex Matrix GmbH (Germany) allows to get the unprecedented surface quality with the effect of «Porzellan plaster» (gypsum with porcelain effect).

The company has a large design office for the implementation of ambitious targets.

Capacities of the company allow to handle even the largest projects and produce more than 250,000 m² per year.

The company is a leading provider of state programs, it underscores confidence in us, and we, in turn, confirm the professionalism and stability of cooperation.

Aristocrate

Artpole represents a unique novelty: gypsum panel with the opportunity of Swarovski crystals installation. Crystals are sparkling, transforming the wall into the precious frame. The design of the panel realistically simulates leather coach tie Chester. Only after touching you can make sure that this is a monolith wall. This installation will be the highlight of the most refined interior, even the most discerning guests will be impressed. The glares look in the most profitable way on dark-coloured wall. Each panel comes with a set of high-quality original crystals (16pcs.) with the diameter of 7,3 mm from Swarovsky factory. Swarovsky crystals are supplied by the official distributor of Swarovsky at wholesale prices without intermediaries. You can find enclosed an official certificate of origin. Guarantee against counterfeiting. Glue for crystals is supplied optionally.

Flora

The company Artpole introduces the first 3D gypsum panel with EASY-LINK easy mounting system.

Along the edges of the panels is a docking zone that allows the installation junction-to-junction without matching the figure and without grouting (it is required only to remove the excess of Pufas by plastic spatula on the docking locations). When installing any panel can be rotated in 90, 180 or 270 degrees, adding variety to the composition. And as the grout is not needed, the time and cost of installation is reduced significantly. Just stick to the wall the panels butt-in-butt, and then paint in any color of your choice.

Wall panels Zoom are ideal for creating bright and bold design. Decorative plaster of the series will be able to revive even the most boring room with a powerful geometric texture and reveal all the facets of your home's interior. The panels are perfectly suited for the design in the style of constructivism, minimalism, techno. The panels Zoom have very expressive and impressive look if complemented with light. With this series of material can be decorated niche, projection or the entire wall.

In the latter case due to the use of several bright contrasting colors, you can visually divide the room into functional zones. Embossed decorative panels Zoom will also be an ornament to any night club, cafe or fashion boutique built in the style of modern décor.

Silk

3d panels of the series Silk hit the elegance and grace of wavy lines and curves. The material creates an atmosphere of calm and serenity. It seems that these curves are endless, as if they are an extension of the natural lines of nature.

Wall finished with decorative plaster, became an independent subject of the interior, it does not require additional treatment or jewelry. This panel with laconic pattern can be a great backdrop for the original lamps and paintings.

To create a unique interior designers often stained wall panels in a variety of colors, or use multiple colors. After decorating the walls of such panels, you can be sure that the interior of your home or office is unique.

Sandy

Decorative 3D panels Sandy are characterized by smooth curves and a very nice texture.

Finishing material is ideal for creating a design in the style of hi-tech and eco-design. The walls are decorated with these panels, reminiscent of the hot desert sand waves or light ripples on the smooth surface of the vast ocean. If you want to enhance this effect, it is enough to paint decorative wall panels in the appropriate color - blue or sand, using a smooth transition color from dark to lighter.

Ampir

Gypsum 3D wall panels are in the form of classical coach tie that was decorating the interiors of the finest European houses of the past centuries. The geometric pattern of rhombus has the distinctive smoothness and elegance, perfectly imitating the folds of tissue. Due to the strict symmetry of all elements the panels Ampir help create an atmosphere of peace and order. Finishing material is ideal for creating a design in a classic English style, Art Deco, Baroque or modern eclecticism.

These panels not only create the effect of volume as 3D wallpaper for the walls, they are really bulky.

Using this material, you can experiment with lighting angle.

Through bulk the panels Ampir can extend the space visually.

Fog

3D panels for walls Fog significantly expand the scope of opportunities for designers. Now, the original interior is limited only by the imagination of its creator. Ornamental plaster panels of the Series Fog is a never-ending line and fuzzy contours that add up to an incredibly beautiful ghostly maze. You can enhance the effect by using multiple point sources of light - volume curves will cast shadows, creating additional lines, fancy shapes and hazy undertones. The material is perfect for interior of any modern styles, will bring a design touch of unreality. 3d wall panels of the Series Fog will emphasize once again the impeccable taste and sense of style of the house owner.

Blade

The ornament of the panels Blade is like a visual illusion, it's one of those endless drawings, in which each successive element forms the next one, forming a chain. The combination of concave corrugated ovals, flowing in thin lines, creates in a room the sense of order and harmony. Using the decorative panel Blade you can generate light, airy pattern that allows you to use them for decoration of all the walls in a room. The material is ideal for any room in the house including the spacious hallway. The panels should be supplemented by the broad borders and trims for the door. You can also use other decorative 3D panels with smaller volume pattern.

Fallout, Sound

3D decorative panels of the series Fallout is a new word in the design, stylish and daring. Volumetric pattern on this element of the decor resembles the blade of the propeller in motion, adding some dynamism to the interior. Figure drawn through reconciliation of the panels in any direction in the plane. Finishing material with original design is perfect for the interior in modern styles such as Constructivism and Techno. Panels Fallout can be covered with paint of any color, the most advantageously will look the paint with a glossy sheen. In this case, each surface will reflect more light, filling the room with glare. Decorative wall panels Fallout allow to form the interior, which previously could only dream of.

Paraline-s

Paraline s - is a series of stylish relief panels with graphic laconic ornamentation. The material for the walls looks spectacular both in the vertical and the horizontal arrangement of the elements. Finishing decorative panels of this series can be carried out both in an apartment house and in public places: cafes, restaurants, shopping centers and cinemas. Poster panels are used as a background, for example, for home cinema, furniture, as well as suitable for allocation of niches or specific areas of the room. The original version - a combination of panels in one room, arranged vertically and horizontally. Finishing materials Paraline s perfectly perfect balance with other gypsum panels with a larger texture.

Item M-0031

Paraline

Embossed decorative panels with a strict geometric texture will be the ideal base to create an interior in any style. Finishing material from Paraline series will be a great decoration for home and office, cinema, restaurants, shopping centers and other public spaces. Of great importance is non-combustibility of the finishing material that can be used for all kinds of buildings. The original effect is created when the light sources are positioned so that the rays fall on the panel not in parallel or perpendicular way, but at an angle of 45 °. In this case, on the wall panels for interior decoration will appear the alternating thin strips of light and shade.

Volumetric pattern of embossed wall panels is made of soft volumetric waves of small height. Elements can be positioned both vertically and horizontally increasing visually the height of ceilings in the room, or expanding the space of the room. To enhance this effect is sufficient to divide the panel into strips by means of color. Depending on their width and number of shades the covering perfectly fits into the interior in the style of eclecticism, minimalism and modern with a little classic. The original version is the alternation of gypsum panels arranged vertically and horizontally. Due to the perpendicular line collision the coverage texture becomes richer, more original and strongly marked.

Hoop

Decorative panels for interior decoration Hoop will become a bright accent in the interior of any apartment. The bold design, eye-catching and pronounced texture are the distinctive features of this series. The best option is to decorate with these original panels only one wall in the room using for other ones materials with more simple and concise design. Due to the bright and bold volumetric figure the Hoop panels can become the separate element of the interior. Due to the small mass 3D decorative panels of this series can be mounted on the surface of the walls for zoning premises. As a result, in just one day, the functional element of the room becomes a work of art.

Soul

A large volume decorative relief of the 3D panels Soul is ideal for large spaces. By using a material with a texture can be finished with a niche or one of the walls of the room. Soul Series is ideal for design in eclectic style, it will go perfectly with almost any interior objects created in different directions. Also, thanks to its versatility gypsum panels can be used in the interiors of the classical style (Empire, Baroque, etc.) And modern (minimalist, modern and others.). Panels can be left whitewashed or painted in any color, depending on your preference. Using multiple shades can visually make the ceiling higher or make the room more spacious and filled with light.

Item M-0019

Ruffle

Decorative wall panels of the series Ruffle resemble geometrically ordered image of the ripples on the water surface. In order to emphasize the bulk of the material, you can use lighting, placing more spotlights in different areas of the wall. The panels are an excellent backdrop for furniture or home appliances. The material is easily processed: it can be cut and drilled, creating space for sockets and shelves. Due to this, a TV or home theater system can be connected without stretching long wires. Embossed 3D panels can be placed in a recess or to decorate their entire wall, highlighting the recess with the help of contrast material.

**Item M-0033**
